Excellent Dan. How did you catch this letter? We too will wait until all parties here are on-board, but this can be a time saver if it's a go.

Per the above letter: No taping required on up to and including 9 volts for nicad , alkaline, or heavy duty batteries.

I have forwarded this link to both Philip Environmental and Enterprise EHS. I will wait to change my site processes until informed by Jimmy that Philip Environmental is prepared to accept untaped batteries greater than 1.5 volts.
